

# UDEEC Newsletter

---

No 02  
3<sup>rd</sup> October 2007

Welcome to our second newsletter!

We trust you enjoyed the first one. We can't believe it is already beginning of October – just two months to summer holidays!

Barbara had a successful trip in July with Anders Skeini; CEO of JACOBI Activated carbons. They visited clients in the gold, water and process industries, including Namwater in Windhoek. Barbara also attended JACOBI's first World Carbon Seminar in Davos, Switzerland last week. In November she will be flying to Istanbul for the BASF adsorbents sales meeting.

MESSO engineers with Hans had visited Sasol in Secunda mid of September on an environmental project, now in conceptual design phase, followed by a journey to Germany discussing at Sasol Brunsbuettel with seven Sasol engineers the Coal Tar Filtration process, proposed for the Secunda operation. He also met with BORSIG in Berlin, KMPT in Munich, DMT, etcetera.

In the meanwhile we have one more addition to our animal family; a Gemsbok calf born in September (after the baby Eland of August), first time out of its hiding yesterday. Please see the picture below.

With warmest regards,

***Your UDEC Team!***

***Sister, mother and calf (named Lucky, the baby born in December was killed by our Zebra).***
